SCIENTIFIC PROGRAM AREAS.

The International Congress of the Indian Society of Chrono-medicine(ICISCM) would present cutting-edge research on nearly all aspects of chronobiology with a special focus on Circadian Medicine & biology: molecular, cellular, systems, neural, physiological and behavioral aspects. The Conference will feature a wide range of topics: e.g., the molecular mechanisms of circadian and non-circadian clocks; the control of physiological functions such as cell cycle, immune system, metabolism and aging by clocks, as well as the implications for health and disease; seasonal and ultradian cycles; entrainment mechanisms of Circadian Energy restriction & Fasting(Low or no energy) and control of sleep timing; the neurobiology of circadian clocks; as well as conceptual aspects of clocks and oscillators with greater emphasis on CHRONOMEDICINE.

The Conference will feature a wide range of organisms, from prokaryotes and lower eukaryotes to plants, animals and humans. Invited speakers represent a variety of scientific disciplines, including biochemistry, food and nutrition and agriculture, molecular genetics, immunology, cell biology, developmental biology, imaging, modeling, sleep research, neuroscience, behavior and human biology with emphasis on Translational Research on hypertension, diabetes mellitus, atherosclerosis, cancer and gastrointestinal diseases.

The Conference will bring together a collection of established and upcoming investigators who are at the forefront of their field, and will provide opportunities for junior scientists and graduate students to present their work in poster format and exchange ideas with leaders in the field. Some poster presenters will be selected for short talks.

The collegial atmosphere of this Conference, with programmed discussion sessions as well as opportunities for informal gatherings in the afternoons and evenings, provides an avenue for scientists from different disciplines to brainstorm, and promotes cross-disciplinary collaborations in the various research areas represented.
